

THE CIMCOOL® REFRACTOMETER

The easy way to measure the mix concentration

The Cimcool Hand Refractometer is a convenient and accurate optical instrument for measuring the mix concentration of metalworking fluids. It is an ease-of-use, compact, pocket-sized instrument that is inexpensive, extremely durable and requires no maintenance. Furthermore, since no chemicals are required, it is safe and friendly to work with and makes it suitable for use in any machine tool environment where metalworking fluids are used. Operation is straightforward and literally takes seconds.

- *Easy to calibrate*
- *Easy to use*
- *Maintenance free*
- *Accurate*
- *Inexpensive investment*

CIMCOOL

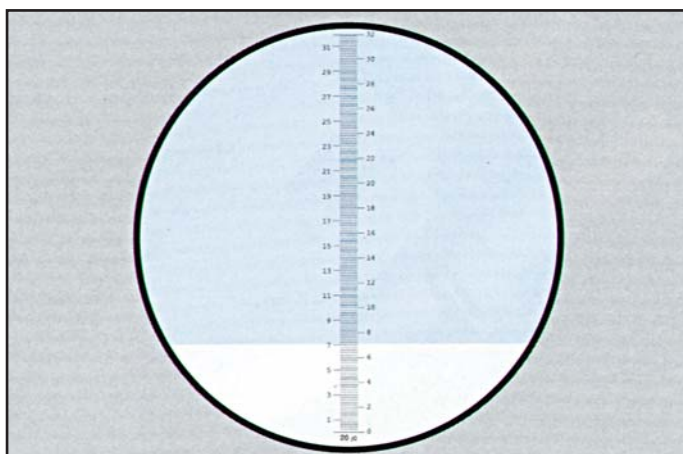

THE SMART WAY TO INNOVATE

Place a few drops of metalworking fluid on the Refractometer prism with the plastic pipette supplied with the instrument

Point the Refractometer at a strong light source and adjust the scale focus and scale calibration knob gives a reading on the Refractometer scale

A typical Image of what you see when you look into the refractometer eyepiece.

The only maintenance required is cleaning with a dry cloth after use
