THE COMPANY

ABOUT

Years of experience and a dedicated team of employees is what makes Anmasi your preferred partner, when it comes to industrial cleaning systems. We have a flexible organization that can adapt to specific needs, depending on which solution you're looking for.

Because of this we have delivered industrial cleaning systems for several applications within a wide-range of industries such as Automotive, Medical, Aerospace, gas- and oil, Prototyping etc.

WE HANDLE IT

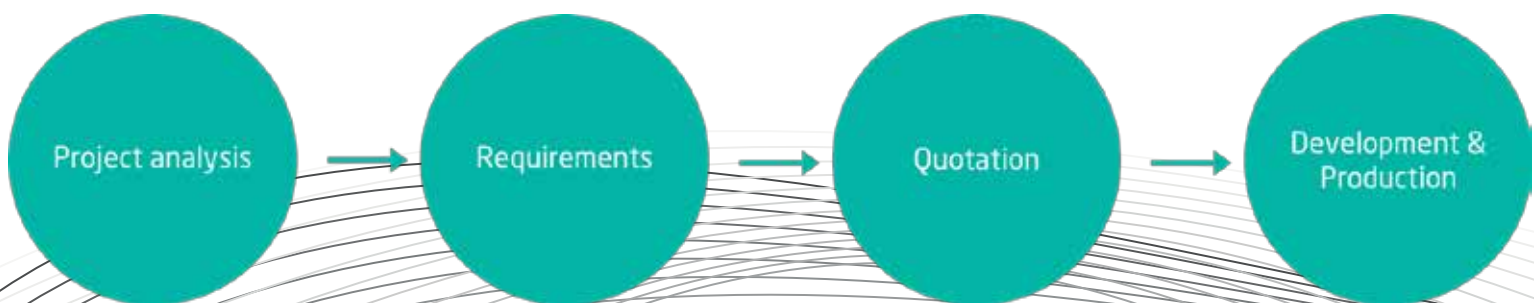

We are more than just a machine manufacturer, at Anmasi you find a wide-range of extra equipment and accessories, which makes it able for us to supply you with a complete solution.

After several years in the business, we have a wide-range of trusted suppliers, which makes us able to supply you everything from the machine and its extra equipment to the consumption products such as cleaning chemicals.

This way we can always ensure that you get the best solution!

THE PROCESS

How are we working together? It's pretty simple. First of all we have to analyze and determine your specific requirements, which is done by looking into your production process and the needs you might have. When the analysis and requirements are agreed upon, we start the development and production of your machine based on the needs.

ANMASI PRECISION CLEANING

EFFICIENT CLEANING

This inline industrial cleaning machine with a conveyor belt is constructed for efficient cleaning of parts in large quantities, in a production line. The machine is manufactured to the specific needs of the customer, and is constructed in modules with ultrasonic cleaning, spraying, passivation and drying depending on the process.

The possibility of combining different cleaning technologies, fixture the parts and designing the machine for the specific application makes this solution ideal, from a quality and process management perspective.

SIMPLE DESIGN

Pure lines, simplicity and high quality plays a key role in Scandinavian design, and this industrial cleaning machine is no exception. The construction is in stainless steel and only using high quality parts from trusted suppliers.

The design itself focuses first on cleaning efficiency, reliability, easy maintenance and user-interface, which is the core areas when looking to design a high-end industrial cleaning machine.

THE MACHINE

EASY TO MAINTAIN

Everything is maintained from one side of the machine, which makes it easy to repair and operate.

It is constructed with large covers that makes it easy to work around the machine, without causing any obstacles during the maintenance periods.

This also makes it easy for the operator to navigate around the machine, and makes observations during the daily production fast and flexible.
